

ULD Management

iCargo ULD is a state-of-the-art ULD Management System that encompasses all aspects of ULD asset management and tracking. The application helps airlines track ULD assets across the network as well as for airports and GHAs to track ULD assets of customer airlines within airports. The system also helps capture ULD loan/borrow transactions and calculates applicable demurrage for agents/carriers as applicable.

iCargo™ is a suite of new generation business systems created specifically to meet the IT requirements of the air freight industry.

The **iCargo™ Business Suite** is a fully integrated suite of business systems built from the ground up on new generation technology. The iCargo™ solution suite has helped our customers across the globe reduce IT costs, increase revenue, improve customer relations and overall efficiency of operations.

iCargo™ is a suite of new generation business systems created specifically to meet the IT requirements of the air freight industry.

Key business benefits

- Flexibility of operation: Can be used in both airline or network mode as well as cargo handler or airport mode
- Accurate and real time: ULD movements and stock is updated in real time
- Seamless integration: Adherence to universal ULD messaging standards

IT benefits

- Enhanced deployment and availability: Fully web-enabled and browser-based client
- Windows-based look and feel (GUI): Easier to learn/adapt
- Latest technology: Built to J2EE and RDBMS standards exploiting all advantages thereof

Key Business Features

- View and monitor own ULDs across the network (Airline mode) as well as those of handled carriers in specific airports (Handler mode)
- Set up minimum and maximum ULD stock thresholds according to anticipated traffic to reduce instances of scarcity of pile up
- ULD movement updates in real time based on flight departures and arrivals through industry standard messaging
- Create ULD loan/borrow transactions from/to airlines, agents etc
- Calculate applicable demurrage based on ULD return according to pre-configured ULD agreements with carrier or agent
- Create ULD damage reports with severity levels and operability. Record repairs carried out on specific ULDs and certify operability
