Give wings to air mail and conquer new heights

icargo
MAIL

iCargo Mail Handling & Mail Revenue Accounting delivers unified mail operations and mail revenue accounting business functions from a single fully integrated solution, available as a cloud offering to air mail business users around the world.

The fundamental design principles that drive continuous technology-led innovation of iCargo solutions offer industry standard business processes on new generation technology and smart devices to deliver enhanced business productivity and customer satisfaction.

iCargo Mail module supports:

-  Real-time scanning with hybrid scanner app for iOS and Android based smart devices
-  End-to-end 'Track-n-Update' of mailbags to postal authorities and handled carrier
-  Allocate capacity with Block-Space Capability for postal authorities
-  Real-time view and update of mail capacity utilization
-  Supports complex USPS process for both international and USA domestic mail
-  Real time availability of mail data for faster revenue recognition and postal billing

**Reduce cost with Smart Automation:**

Hybrid scanner application to perform real-time mail handling operations using both iOS as well as Android devices. CARDIT processing & RESDIT trigger capability provide automation opportunities at import and export side, providing real-time visibility of mail operations to Airlines and postal authorities. MLD messaging capability, interface with IPC MRD and inbuilt API's for data exchange offer additional automation capability, leading to improved cost control.

**Configure your needs:**

Advanced configurability and support of IPC, UPU standards as well as compliance with mail security regulations including e-CSD or through iCargo's inbuilt embargo framework capability. Fully compliant to USPS international and domestic operations requirements. Seamless integration and data share with add-on capability including Truck Cost Estimation, Runner Management, ULD inventory, Customs Reporting etc.

**USPS:**

Supports complex USPS process for both, international and USA domestic mail. Mailbags auto rated based on USPS contract are marked as performed or underperformed based on analysis of operational data and USPS defined service standards. This enables auto calculation of the resultant incentives or disincentives.

**Integrated Accounting:**

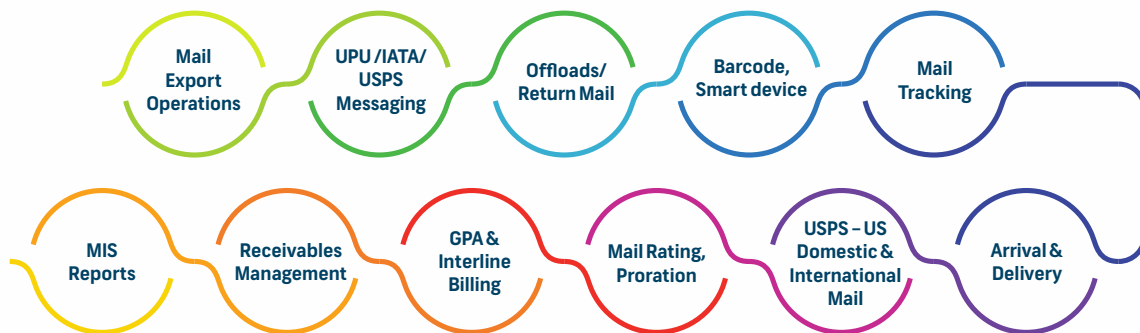

A single platform for Mail Operations and Revenue Accounting allows seamless flow of mail data, thus enabling upfront validations, real time rating, revenue recognition and billing. Mail Revenue Accounting also works independently in a standalone mode.

**Improve billing accuracy and cash flow:**

Ensures highest data quality standard at each touch point in mail operations and revenue accounting. Manual intervention is for exceptions. Advanced proration engine, automated invoicing with interline capability, along with robust receivables management system and accounting, drives "auto-pilot" mode operations and enables faster cash flow realization from business

**Gain from strategic insights:**

Standard reports, Report Designer module, Data extracts & Integrated BI provide strategic insights on KPI's. Report Designer functionality provides the capability to create quick reports with flexible filters and report content, including the ability to group data at various levels for any type of custom report.

iCargo™ is a suite of new generation business systems created specifically to meet the IT requirements of the air freight industry.

The **iCargo™** Business Suite is a fully integrated suite of business functions designed and engineered on new generation technology. The iCargo™ solution suite has helped our customers across the globe reduce airline cargo IT costs, increase revenue, improve customer service and overall efficiency of operations.
