Digitize, automate and simplify network cargo handling

ipartner
HANDLING

iPartner Handling is an innovative cloud-based platform that digitizes the integrations between airlines and their ground handling partners -

- ✔ Addresses airline-ground handler communication gaps that are usually met offline through emails and phone calls
- ✔ Drives proactive and task driven, instead of reactive and follow-up based style of working
- ✔ Equips airline handling agents to perform airline tasks and processes over common mobile and web applications
- ✔ Improves airline premium product reach & service quality with lower IT infrastructure costs
- ✔ Supports direct API based integrations between airlines & handling agents IT systems over the internet
- ✔ Reduces ground handlers' work duplication and need to work on multiple airline systems

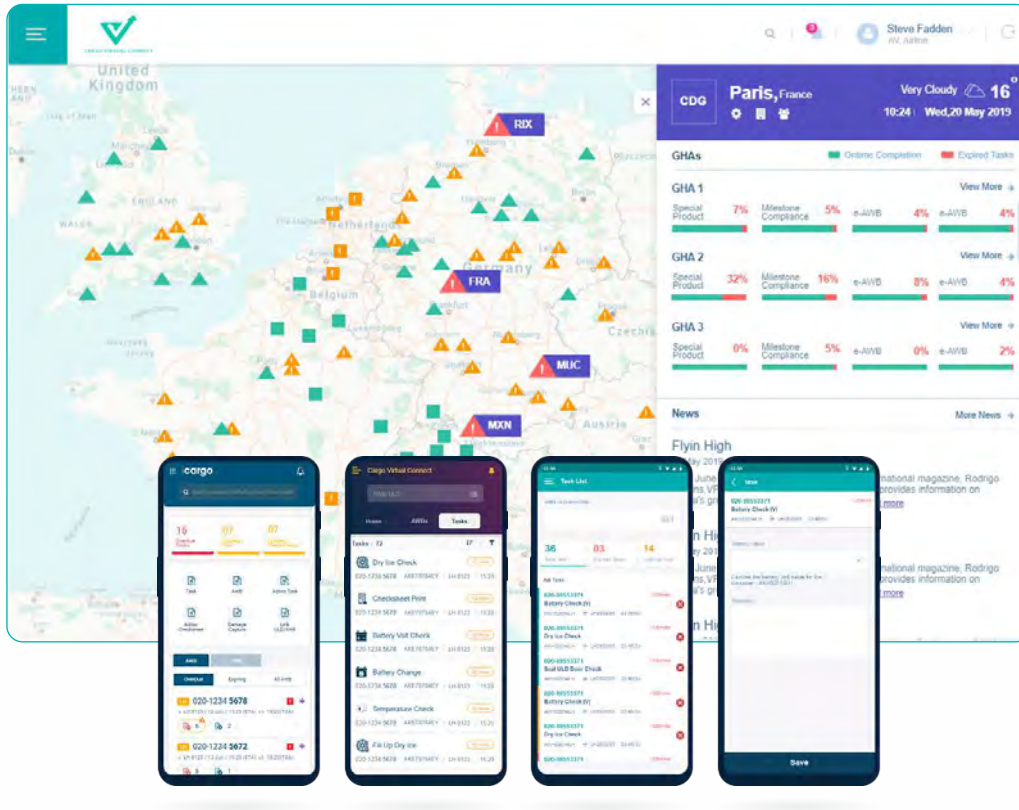

Proactive, instead of reactive mode of operations

Scalable across multiple mobile and web devices

Gain real-time operational visibility across entire network

Enhances network handling performance and SLA adherence

Increase Operational Visibility across entire airline network through network-wide and individual station-wide deep-dive dashboards

Rich, real-time integration spanning multiple use cases such as special product handling, check sheets, e-freight, et al, real-time

Expand revenue opportunities by growing your premium product network reach and offering on-demand value-added handling services to customers

Enhance productivity by eliminating data duplication efforts and the need to maintain data across multiple airline & ground handler systems

Data-first approach enables to quantify the effectiveness of airline processes and measure handling performance at a station level, based on rich operational data

Community driven: Single instance, SaaS platform ensures partners, use cases and features are available immediately to the entire customer community
