

Independent Testing Services

Domain Testing Services | Digital Testing Services

IBS as an Independent Testing Service Provider

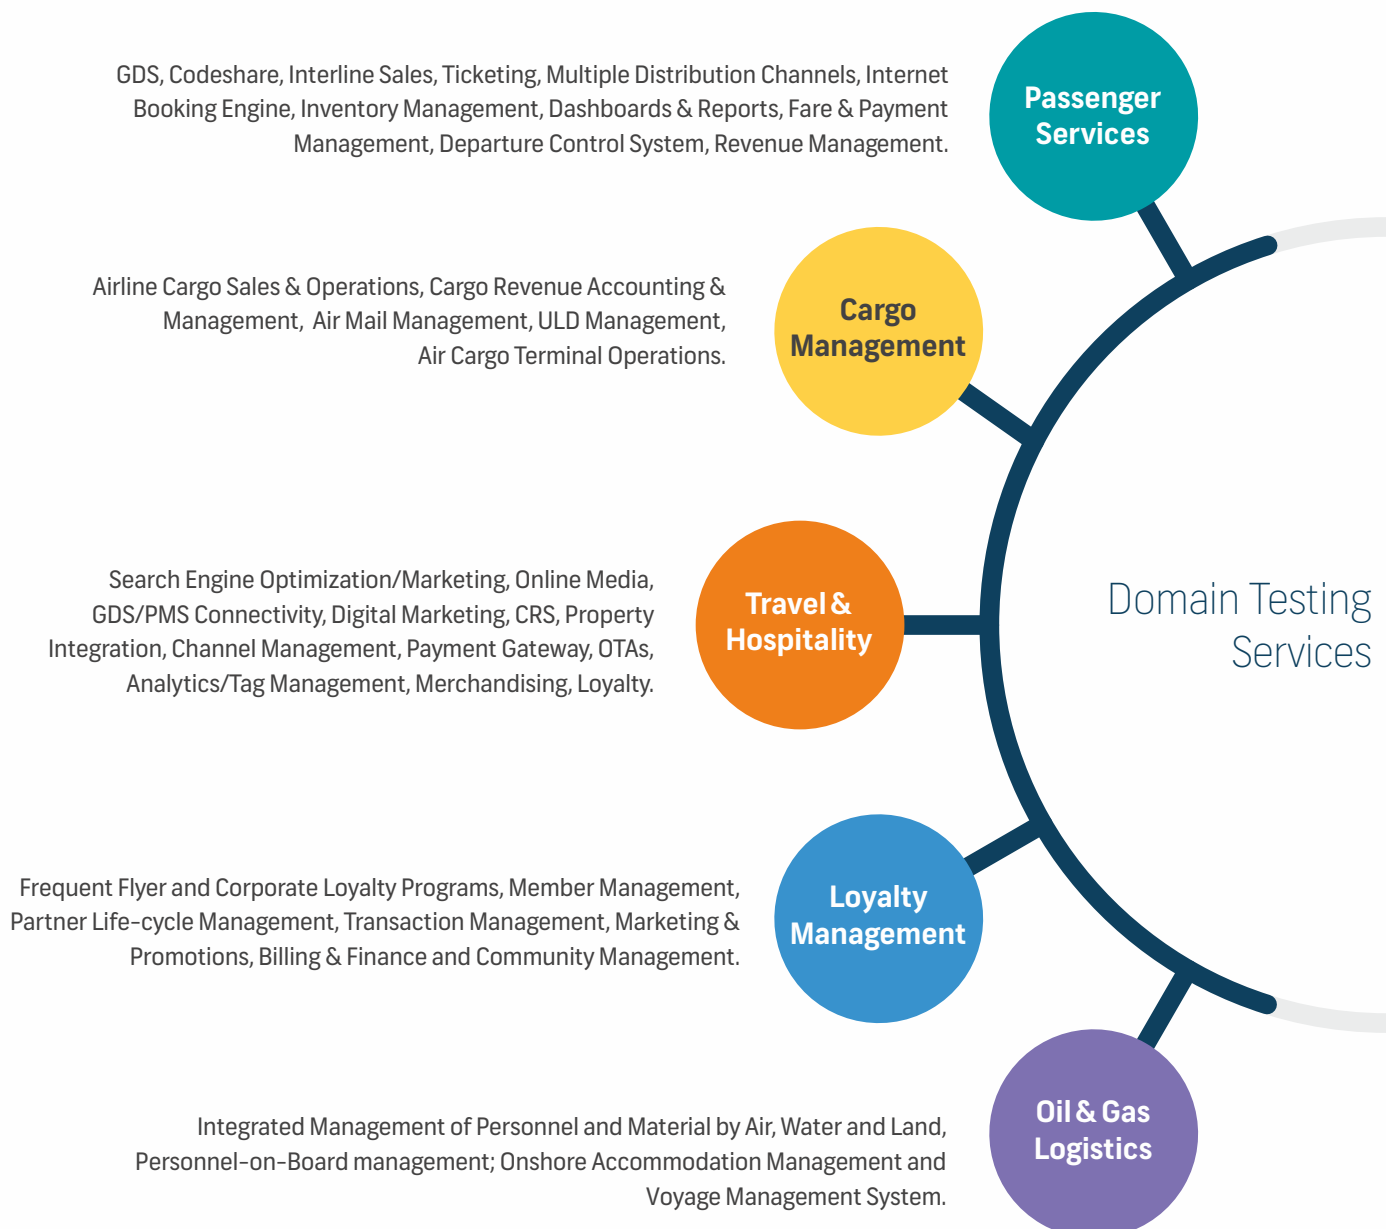

IBS provides end-to-end software testing services to help enterprises in Travel, Transportation and Logistics industry to deliver high quality software, resulting in competitive advantage and time-to-market acceleration. IBS Independent Testing Services is one of the matured practices of IBS Domain Led Services.

Quality professionals with TTL domain expertise, inbuilt test repository, real-time knowledge base, tested & certified frameworks/tools and customer focus enable IBS to provide comprehensive solutions to clients in the TTL industry.

IBS uses a standardized testing model, which supports various delivery models such as Agile, DevOps and continuous delivery. These are then customized based on customer specific requirements and expectations.

IBS Independent Testing Services involves two types of services,

Domain Testing Services & Digital Testing Services

Key Differentiators

- ⚙️ Undiluted and exclusive focus on TTL domain with experts & product line
- ⚙️ Reusable test assets for each domain test service
- ⚙️ Customized automation framework pertinent to TTL domain
- ⚙️ Ready to use integrated test environment with IP assets
- ⚙️ Legacy of testing large and complex systems

Digital Testing Services

Enterprise QA Automation Services (EQAS)

- Automation to support DevOps environment
- Reusable frameworks for TTL customers
- Process automation to validate build to release quality

Product Acceptance Test Services (PATS)

- System Integration, Final Acceptance and UAT support
- Domain experts to validate business requirements
- Multi-vendor Management for Travel, Transportation and Logistics IT solutions testing

Managed Services (TCoE/Test Factory)

- End-to-end testing from functional to acceptance test
- Transition from incumbent vendors / captive organization
- Assured output/outcome model for delivery

NFR testing services (NFRS)

- SMAC, usability, security, performance offerings
- Projects supported with dedicated Lab facility, Compliance, Industry standards & Frameworks in mobility and multi-tenancy/cloud

Customer Benefits

Faster time-to-market

- Reusable automation frameworks and tools ensure reduced regression cycle time and cost.
- Reusable domain specific test repository helps in reducing the time-to-market by 20%.

Reduced IT expenditure

- Ready to deploy test repository enables clients to reduce cost and design time, which eventually boosts their bottom line.
- Reduced regression testing cycle time, improved test coverage and cost savings through reusable automation framework.

Enhanced user engagement across channels

- Improved application quality attracts more end-user involvement which provides additional revenue streams through cross-selling / upselling.
- Domain specific test assets and automation, reducing client expenditure.

Improved application quality and performance

- Testing capabilities and niche domain expertise ensure consistent quality and performance across all touch points.
- Early defect detection and prevention from IBS' TTL domain expertise, technology competency, engineering excellence and metric driven test management tools and processes.
